

Hosted By: Periodontal Associates
Drs. Feuerman and Castellucci

Continuing Education

December 2, 2009, 6-9pm,

Registration & Light Meal: 6-6:30pm

The Crowne Plaza Hotel and Conference Ctr.

1360 Worcester Street, Natick, MA

Featuring: Theo Kapos, DMD, DMSc (Implantology Fellow)
and Ira Dickerman CDT; (Dickerman Dental Prosthetics)

3 CEUs-Complimentary

Dental implants provide the foundation for prosthetic systems that look and function like natural teeth. In 1979 Dr. P.D. Ledermann successfully demonstrated that four implants can be immediately loaded in the edentulous mandible and postoperatively splinted with a bar-overdenture. His approach was widely acclaimed, as it enabled rapid patient treatment, eliminated the need for multiple surgical procedures and documented a reduction in overall patient stress.

Today, we can get complete, fixed-like patient function in less time and with low costs. Dr. Kapos and Mr. Dickerman will be presenting this important treatment option along with demonstrating how you can provide this for your patients, chair-side. Dr. Kapos will be providing in-depth, today's, implant-supported prosthetic options for the fully edentulous patient as well as the prosthetic benefits and applications of newer implant designs. This is a lecture and materials demonstration course.

Implant-Supported Overdentures
Helping Your Patients Regain An Active Lifestyle
