CE Event: Implant-supported overdentures &
3D dental implant planning software

When: December 21st, 2009
Time: 6:00pm
Where: Dickerman Dental Lab
76 Pond St.
Sharon, MA

To register: Contact - Adam Townsend
Phone – (401) 683-8629
Email- adam.townsend@dentsply.com

Credits: 3CEUs- Complimentary

Dental Implants provide the foundation for the prosthetic systems that look and function like natural teeth. While aesthetics and function are considered the primary benefit of the dental implant procedure, people desire reduced treatment times. While current systems have arguably improved their restorative methods they are still lacking. Several current implant systems requires the use of laboratory-fabricated superstructures. Thus, patients continue to experience increased cost and a delay between implantation and the subsequent restoration fitting.

In an effort to improve bar and clip overdenture systems DENTSPLY created the SynCone System with the following in mind:

- Meeting the requirements for immediate treatment
- Decreasing total treatment time
- Simplifying technical procedures
- Cost effective treatment

Jose Hoyo, D.M.D., PC and Ira Dickerman, CDT, AAS will be presenting on this important treatment option, how to present this to your patients chair-side, and how to treatment plan using today's 3D dental implant planning software.

There will be a light meal & refreshments served.
