

## Shade Taking

- Take the shade before you work on the patient, because the teeth become desiccated and the shade may be inaccurate after the tooth preparation.
- ➤If it looks blurry and washed out to you, it looks blurry and washed out to us!
- ➤ Hold the shade tab in the same plane as the tooth-Incisal to Incisal and Incisal to gingival of the tab.
- Make sure the shade name (A2) is visible in the photo.
- ➤Take a photo of the adjacent teeth.
- ➤Don't forget the stump shade for anterior e.Max restorations.

See page 2

## <u>Incisal to Incisal</u>

Note the frosted shade tab and the visible Shade Name

Incisal to gingival

**DO NOT** cover the tooth with the shade tab
